

Leaders in Fiber Optic Lighting Technology

Super Side Light Fiber Optic Cable

Forget what you previously thought fiber optic lighting could achieve because now fiber optics are brighter than ever before! SafeTGlow provides a solid core fiber that emits up to three times more light than any existing solid core side light fiber on the market. The possibilities for using a flexible, heat-free and energy efficient fiber optic cable this dazzling are endless! Super Side Light is specifically designed to be powered with LEDs, which means conventional light drivers are not required.
